halo

acoustic solutions

Halo is an elegant and robust market leading fin system, providing acoustic solutions to commercial, education, retail, and industrial accommodation.

With standard extrusions in 24mm and 12mm, the channel accepts a wide range of absorptive PET panels, with Echo Panel as the standard offer. Select a standard design and size, or allow us to customise to either your design direction, or a corporate branding.

All channels are suitable for direct mechanical fixing to ceilings, or suspended proprietary ceiling systems. A custom suspension system can be designed and supplied using our large range of standard or custom Halo components including the Halo universal channel. There is not a space that we cannot provide a fully resolved system for.

The Halo extrusion is the most rigid and solidly engineered solution with mechanical fixing points designed throughout the system, allowing specifiers and designers to utilise the halo platform to not only suspend fins, but also other ceiling services including lighting, speakers and other technology.

Halo offers a range of colours within the 12mm and 24mm thickness

Acoustic Properties

The Halo system retains, and in many cases exceeds the published noise absorption properties of the material used for the fins. Different configurations will produce varying results in excess of the published maximum NRC of the fin media, however that maximum published maximum figure will always be obtained as a minimum.

Size and Design

Halo channel is produced in 6.5m lengths however can be ordered cut to size. The channel is available in all standard Dulux powdercoat colours or natural anodised. Premium powdercoats and custom anodising are also available subject to MOQ.

24mm fins are available in standard lengths of 2380mm and 12mm lengths in 2780mm

Standard heights are 100mm, 150mm, 200mm, 300mm & 400mm. Custom heights and designs are available on request. Unlimited cutting profiles and shapes are available from Cre8's state of the art inhouse cutting equipment.

Cre8 also produce all extrusions, fins, bracketing and connectors both standard and custom from our own Australian factory or nearby local production partners. This allows us to produce both standard and custom projects on the shortest of leadtimes.
